

Viking Tactics Barricade

© 2007 Viking Tactics

The Viking Tactics Barricade provides the shooter with an extremely functional and transportable training aid that can be built in an afternoon with basic woodworking tools and skills.

Use 3/4" Painted Plywood
(Hardwood or regular-grade plywood, but not treated plywood, then paint your barricade with a quality exterior-grade latex paint.)

Base legs are 72" long and have holes at ends so barricade can be staked into the ground.

Barricade is secured to base legs with 1/4" bolts and wing-nuts. Barricade and legs are marked.
